

Intranet & extranet development

Xsdot is an experienced company committed to develop innovative intranet and extranet solutions to fulfill the requirements of its customers. Xsdot focuses on web-based intranet and extranet applications that are safely and widely accessible through the internet. We have developed many standard web components and services that enable us to develop and implement quality and complex intranet solutions rapidly.

Xsdot's intranet and extranet solutions seamlessly integrate with other Xsdot services like CRM, Financial services, e-Commerce, Community and Content management services (See [Xsdot full component](#) list for more information).

Intranet

An intranet is a private computer network that uses internet protocols through a network to securely share part of an organization's information or processes with its employees.

Extranet

An extranet is used to share part of an organization's information and processes with for example suppliers, vendors, partners and customers. An extranet is many times an extension of an intranet but can also be a stand alone application.

Why Xsdot?

Xsdot provides a single platform where employees and partners can access and query information from anywhere efficiently, which reduces operating costs. Each one of our intranets and extranets are custom architected according to the needs of our customers. We are known for our strong project management process, which assures quality, consistency, and delivery on time within budget.
