

Web services | web components

Xsdot developed many web based services that are easily placed and managed in the Xsdot hierarchical web application server.

All services & components are managed, they run in a safe and secured environment without the need of any maintenance.

All services are compatible, reusable and clone-able. Just place or insert the web services that you need to architect your web applications out of the box.

Below is a list of the most used web services and components,

Components & services

[Content components \(12\)](#)
