

Item presentation and design

The presentation and design properties control how an item presented. The items design consists out of three elements,

Cell design	Represents the design of the item.
Page design	The design of the page that the element is presented in.
Navigation design	The design of the navigation that the element is presented in.

The types and number of selectable template depend on how many templates have been implemented by the designer into your application.

Item invisible / act as container

With this option it is possible to make an item invisible and act as a control block for its child items.

Show head

Enables or disables the presentation of the item's head/name/title.

Show description

Enables or disables the presentation of the item's description.

Show content

Enables or disables the presentation of the item's content.

Properties settings in item menu

Presentation & design property settings are also available directly in the item menus.
