The following options are available,

As entered

The children are ordered as they were entered. (First in first out).

By name

The children are ordered by name/title.

By creation date

The children are ordered by creation date.

By modification date

The children are ordered by modification date.

Custom

The children are custom orderable. Use the drop down boxes in the list to order the elements.

Invert

Inverts the order

Change item order by using drag & drop

When a parent item is setup to align the children customly, you can also change the order by using the drag and drop functions directly in the page or item tree (browser tree).

Property settings in item menu

Child order settings are also partly available directly in the item menus.
