

## Template service

This service is used by designers to create design definitions for the Xsdot application platform, services and components. The template service is an open template definition that is used to store all design templates like (x)Html, Javascript, Stylesheets, etc.

The template component is also used for placing html parts into content.

Template name:

Template description:

Template Type:

Template: 

```
function submitForm(f, into)
{
  var fe = document.getElementById(f);
  var fl = fe.elements.length;

  var bwrId = "";
  var q = "/?";
  for(var c=0;c<fl;c++)
  {
    var fn = fe.elements[c].name;
    var fv = fe.elements[c].value;
```
