

Link component

The link service has additional functions to the links that are created with the content service. The link service can for example contain special designs and has options to target a link to a new window or popup with specific sizes.

The screenshot shows a web form titled "Link service" with the following fields and values:

- link name:
- link description:
- design template:
- link type:
- link location:
- link target:
- Dimensions: x

Link name

The title or name of the link service.

Link description

The description of the link service.

Design template

Enables to select alternate designs for the link service.

Link type

Specifies whether the link is internal, external or internal by handle.

Internal	For linking to an internal resource.
External	For linking to an external resource.
Internal by handle	For linking to an internal resource using a handle.

Link location

Enter the location for an external link or select the location for an internal link.

Link target

Specify the target of the link,
