Settings:

Name

The name of the 'textarea input', this name is used as the input 'key' unless a 'input key' value is given.

Description

Description text of the 'textarea input'.

Design template

If available, specific 'input' designs can be selected here.

Input key

This is the 'technical' input name and is optionally used for application and database forms. When the key is blank, the input name is used as the key. Beware that input keys must be unique in a form for the form to function correctly.

Initial value

This is the initial value of the input.

Value test

When selected the given value will be tested. The following options are available,

- * none, the value is not tested.
- * value is compelled, the value is tested for occurrence.
- * test for a valid text length, the posted text must be in the given minimum and maximum character length.

On error text

This is the text that is presented to the user when an error occurred on form post.
