

Variable group

A variable group component is the root element of a variable and attribute system. By defining variable groups, multiple variable and attribute systems can be created in a web application.

The customer or visitor can select the variable groups in the attribute drill down modules.

A screenshot of a web application window for configuring a variable group. The window has a title bar with a 'G' icon and a close button. It contains two text input fields:

- variable group: Music variables
- description: Music variable and attributes definitions...

- [-] Attribute systems
 - [-] G Music variables
 - [+] V Category
 - [+] V Artist
 - ▶ [-] V Media
 - A CD
 - A DVD
 - A mp3 CD
 - A Download
 - [-] G Clothes variables
