

Content reader & post robot

The content reader robot can read content from other sites and place them in local sites or applications in the form of community messaging systems like forums, blogs, news feeds, etc.

The content reader component can be linked to a community member making it appear as a real live member of the community. Multiple content reader robots can be placed simultaneously into your community applications.

The Content reader robot has the following benefits for your communities,

- * Automatically post resources and content from other sites and communities.
- * Quickly fill empty communities with content and articles.
- * Concentrate multiple resources into one community system.
