

Green Website™

In 2009 Xsdot has experimented with new energy efficient web servers combined with sun collectors to enable a 100% green hosting environment for its customers.

In 2010 Xsdot will exchange its whole hosting platform to this new energy saving strategy. In the new situation we will not use energy anymore but even produce it.

Place a Xsdot "Green Website™" logo on your websites and applications!

Place an "Green Website™" logo on your website to show your customers that you have chosen a energy responsible host for your sites and applications!. [Contact us](#) for more information.
