

Introduction to ecommerce administration

The Xsdot order administration system contains the following three administration modules,

Order administration (full administration system for site administrators).

Package administration (for package administrators).

Financial administration (for financial administrators).

The 'Order administration' contains all functions available in the system including the functions of the package and financial administration modules.

The package and financial administration modules only contain the needed functions for administrating packaging and finances.

The application at least contains a 'Order administration' (full administration) module, larger companies/sites may contain the extra 'Packaging' or 'Financial' administration modules. Employees that only have access to the package or financial administration module can only access their specific administration tasks.
